ISOcat a Data Category Registry

- ISOcat (isocat.org) is the Data Category Registry
 - for ISO Technical Committee 37 *Terminology and other language and content resources*
 - hosted by its registration authority *Max Planck Institute for Psycholinguistics*
- ISOcat provides everybody the means to
 - find and select data categories
 - also via tools using an API
 - create and share data categories
 - submit data categories for ‘standardization’ by
 - CLARIN-NL/VL
 - ISO TC 37

ISOcat and CMDI

- In the Component Registry editor you can make concept links to
 - ✓ public
 - ✓ metadata
 - container, complex or simpledata categories
- When needed new data categories can be created
 - remember the ISOcat tutorial or see isocat.org/manual/
 - ✓ assign them to the metadata profile
 - copy the PID to the ConceptLink
 - share them with CLARIN-NL/VL
 - [Ineke](#) oversees a workflow to make them CLARIN-NL/VL recommended
 - ✓ make them public before your component/profile goes public

Thank you for your attention
