

Reaching out to the users

Steven Krauwer

Axel Herold

Arjan van Hessen

Motivation

- In the end, the success of CLARIN will be in the use of tools, resources, standards and more by the proposed users: scholars in the Humanities (and eventually Social Sciences).
- It is nice to create an infrastructure with trusted identification, one time log-in, standardized tools and resources,
- But without the users it is a useless initiative.

Items to address

1. Finding the users
2. Do our solutions correspond to their problems?
3. Usability of tools: can they use them?
4. Visualisation
5. Requests for new types of data
6. Tutorials and web material (movies, courses)
