

CLARIN A-services offered by The Language Archive

[to be published at <http://tla.mpi.nl>]

The Language Archive has several A-services on offer. These services relevant for the infrastructure as a whole and need to be offered at a high level of commitment (stability, availability, persistence).

Data deposition service

Researchers can deposit their linguistic or cultural data, as described at <http://tla.mpi.nl/resources/archiving-service/>

The Virtual Language Observatory

A facet browser that allows users to quickly explore a large amount of language resource metadata:

<http://www.clarin.eu/vlo/>

OAI-PMH Harvester

This service gathers metadata from centers all over the world and makes them available for other services (like the VLO):

<http://catalog.clarin.eu/oai-harvester/>

CMDI Component Registry

The component registry allows metadata modelers to share reusable building blocks that can be combined into a metadata schema. Semantic interoperability is ensured by links to ISOcat:

<http://catalog.clarin.eu/ds/ComponentRegistry>

ISOcat, RELcat, SCHEMACat

An ISO-modeled data category registry that provides extensive definitions of concepts used in metadata and language resources:

<http://www.isocat.org/>

A registry where relations between data categories can be registered:

<http://lux13.mpi.nl/isocat/relcat/>

A registry for XML schemas:

<http://lux13.mpi.nl/isocat/schemacat>

CLARIN Identity Provider

An authentication service for users who do not have access to a SAML-compliant academic Identity Provider:

<http://www.clarin.eu/page/3398>

CLARIN Discovery Service

An intuitive tool to select an authorization service:

<http://www.clarin.eu/page/3496>

Developer toolkit: SVN, Trac, Nexus

An environment for CLARIN developers: source code repository, wiki, ticketing system, Maven repository:

<http://trac.clarin.eu/> (user account requests: trac@clarin.eu)
