

# CULTURAL HERITAGE DATA

## REUSE

# CHARTER

Making Cultural Heritage Data easier to access, more sustainable, reproducible and citable.

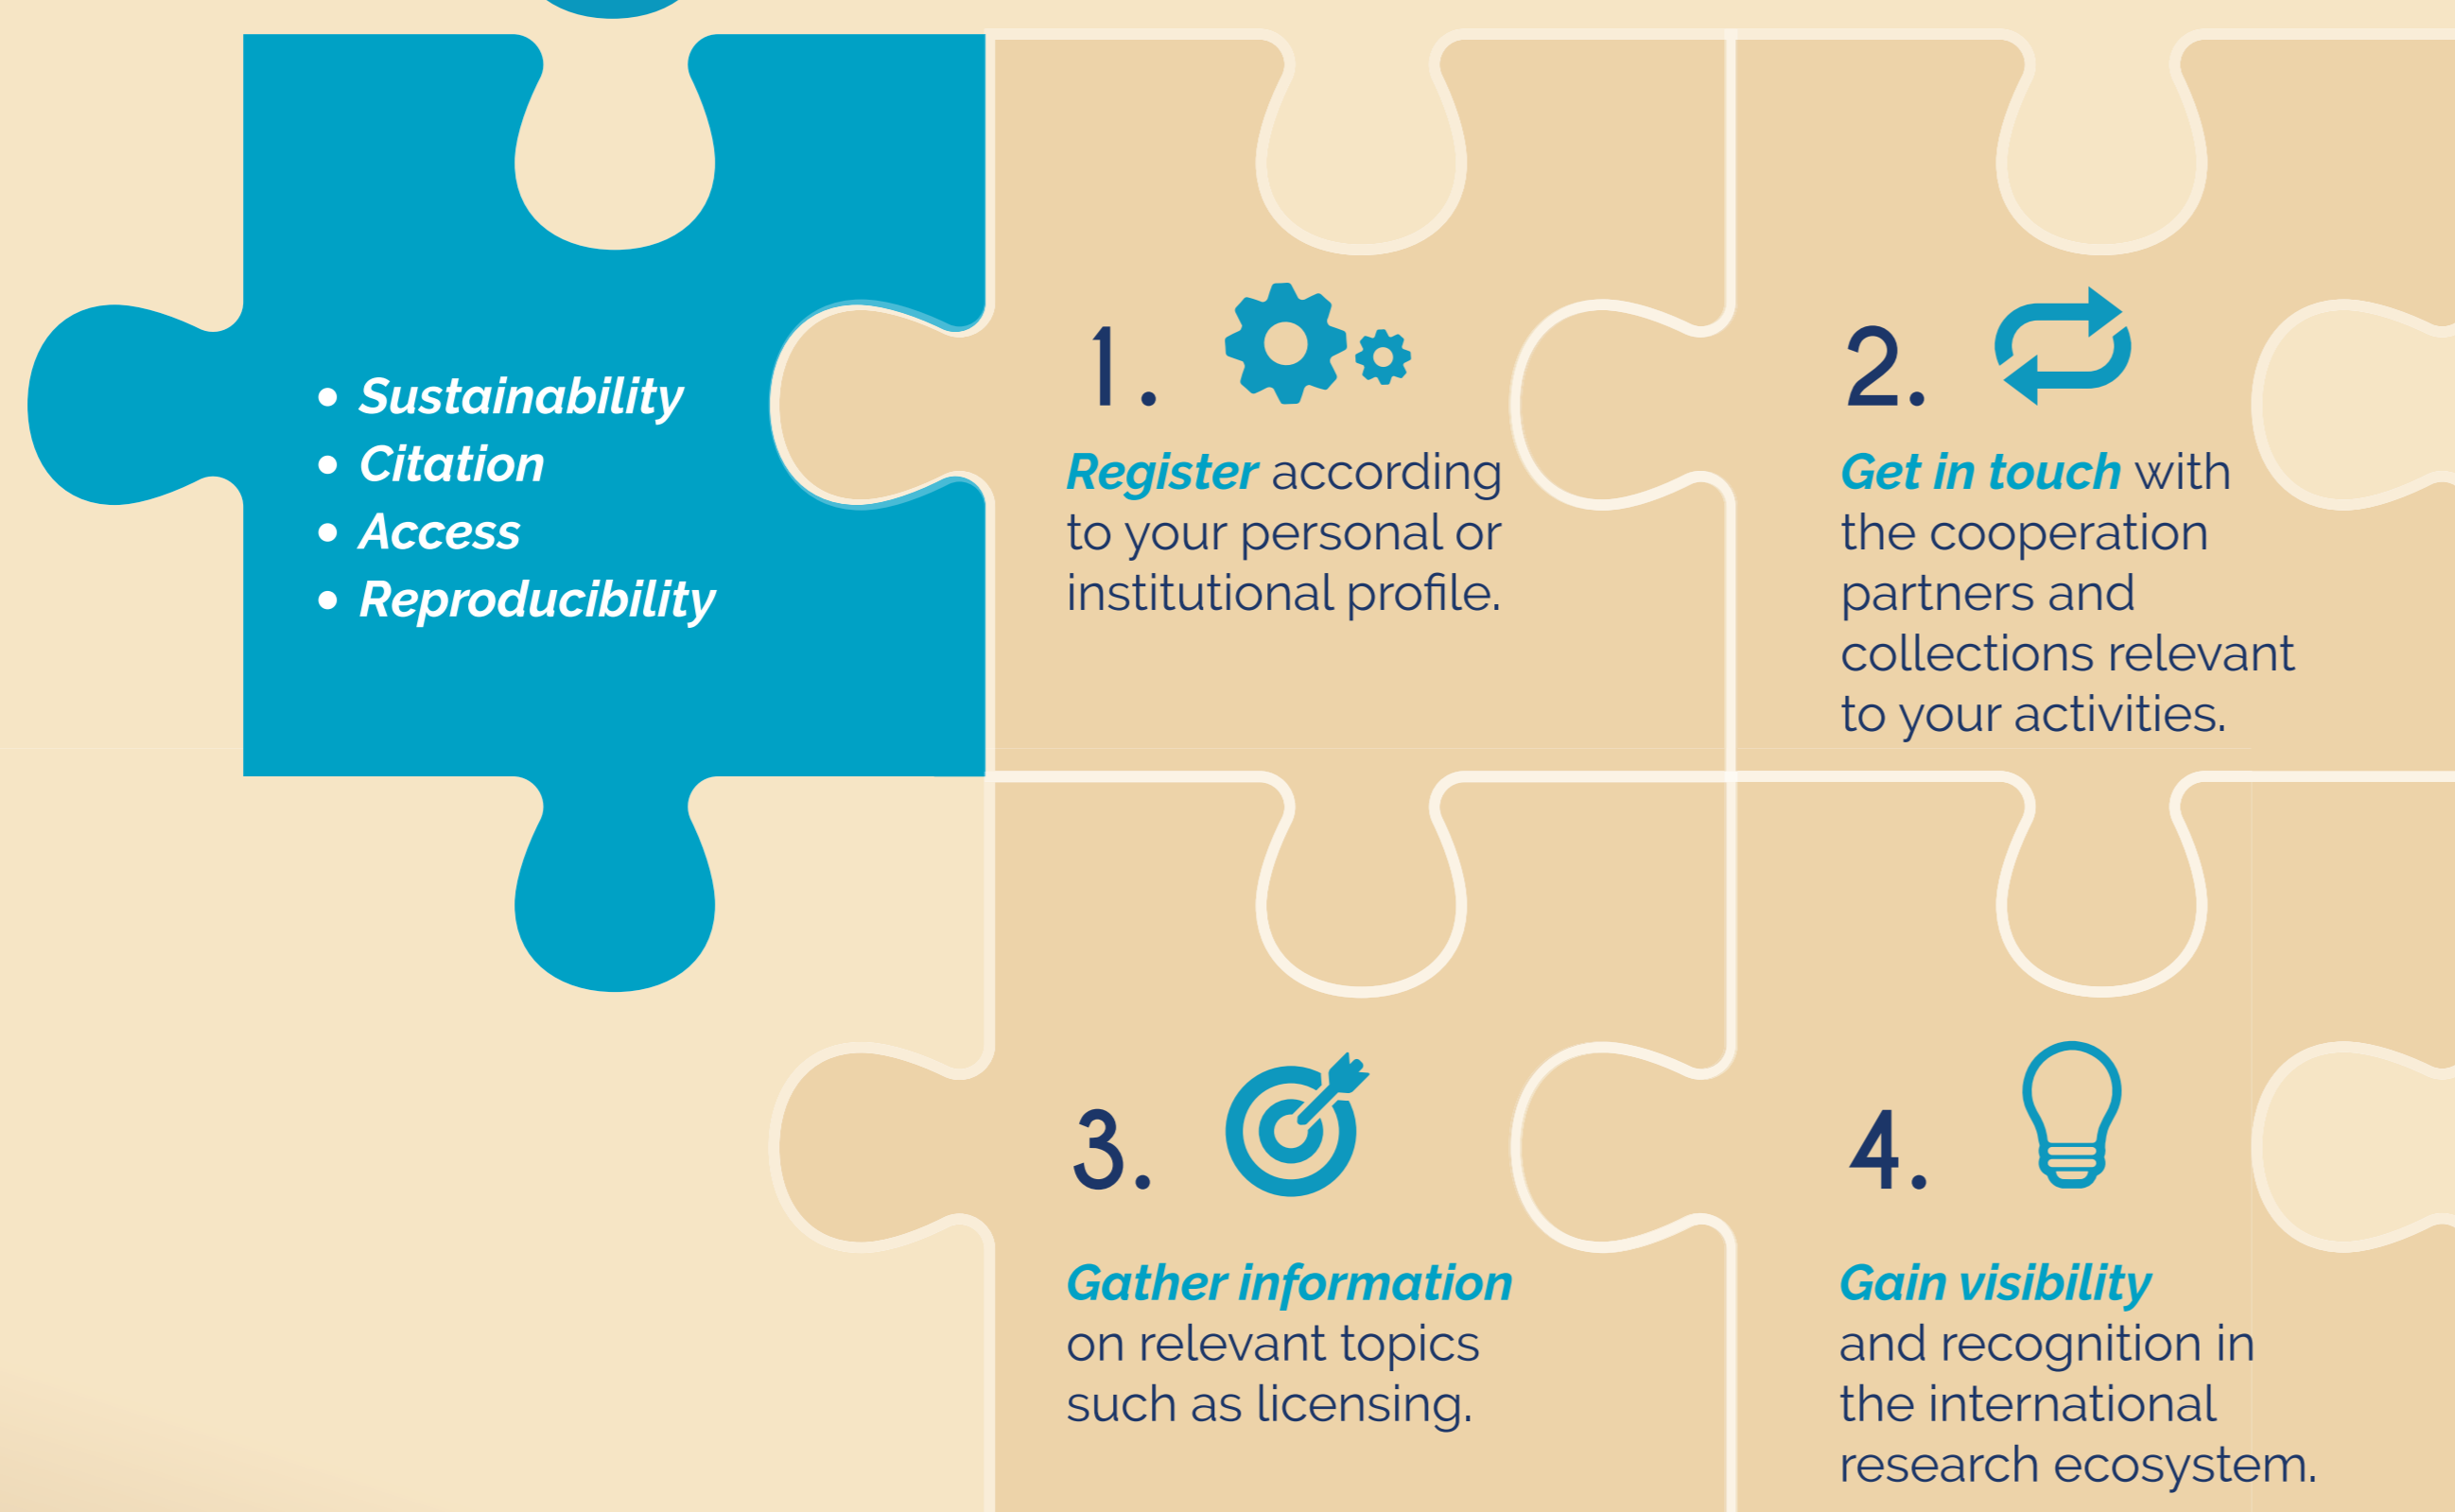

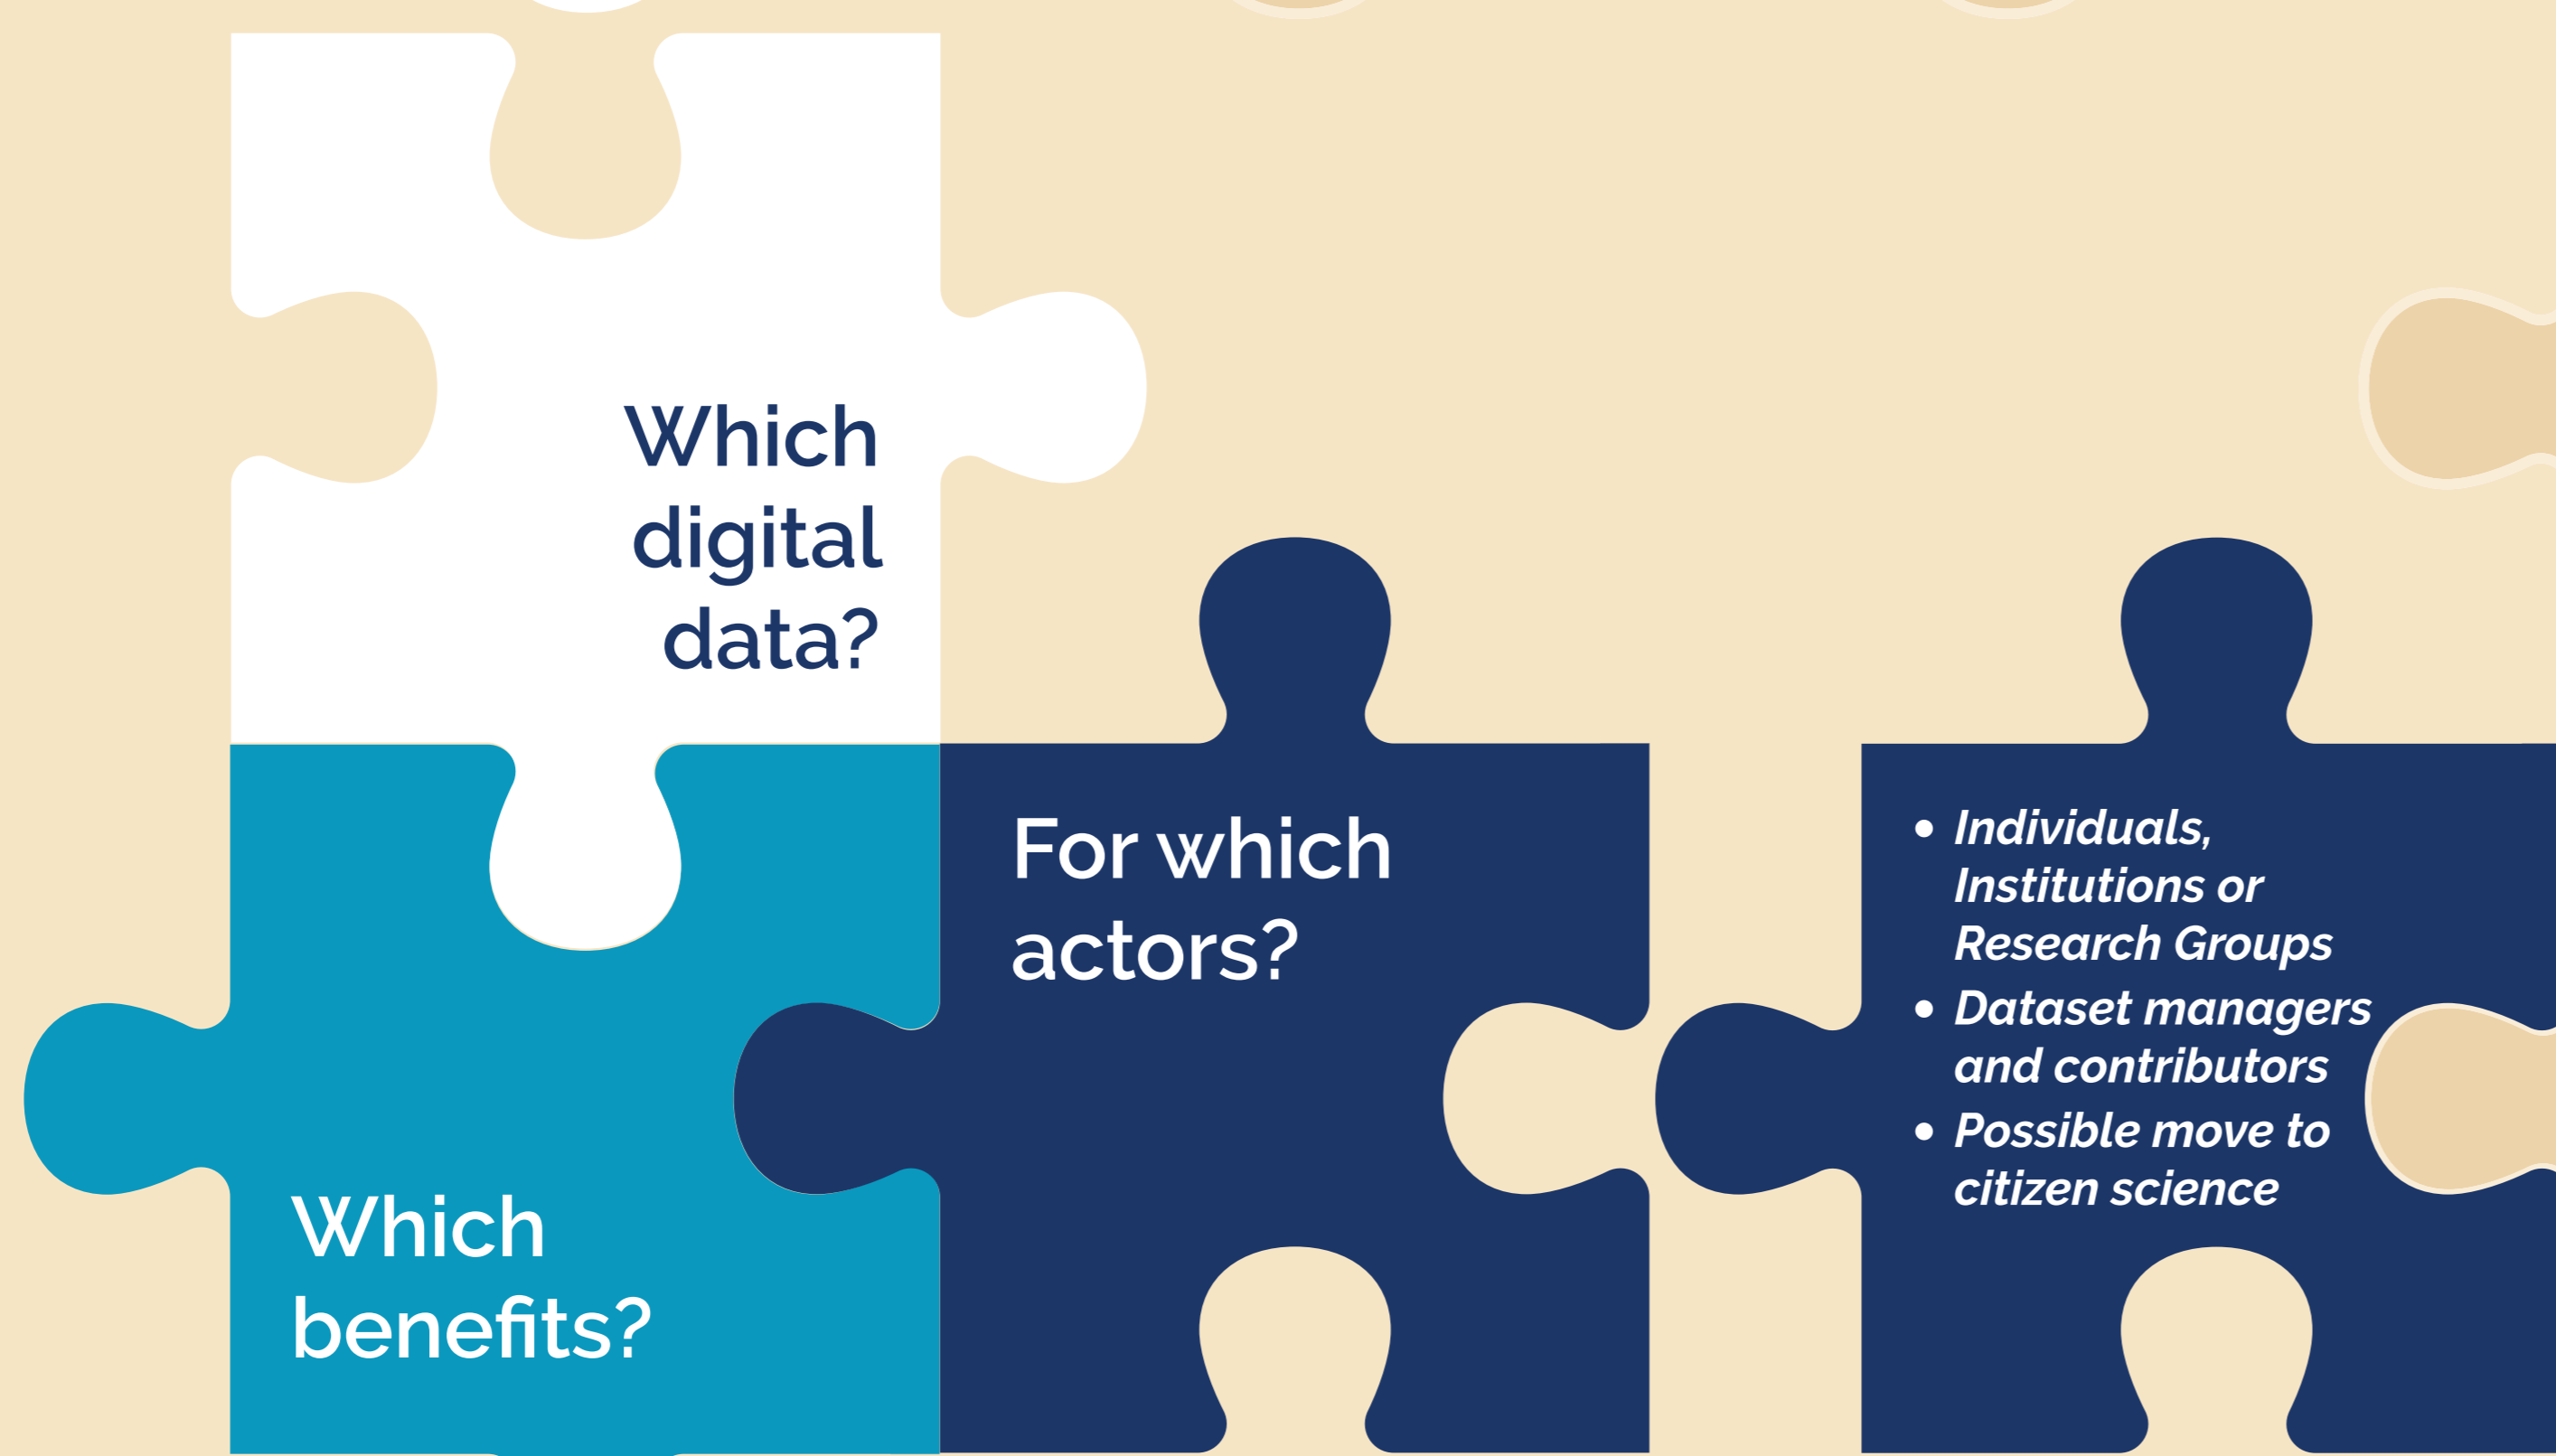

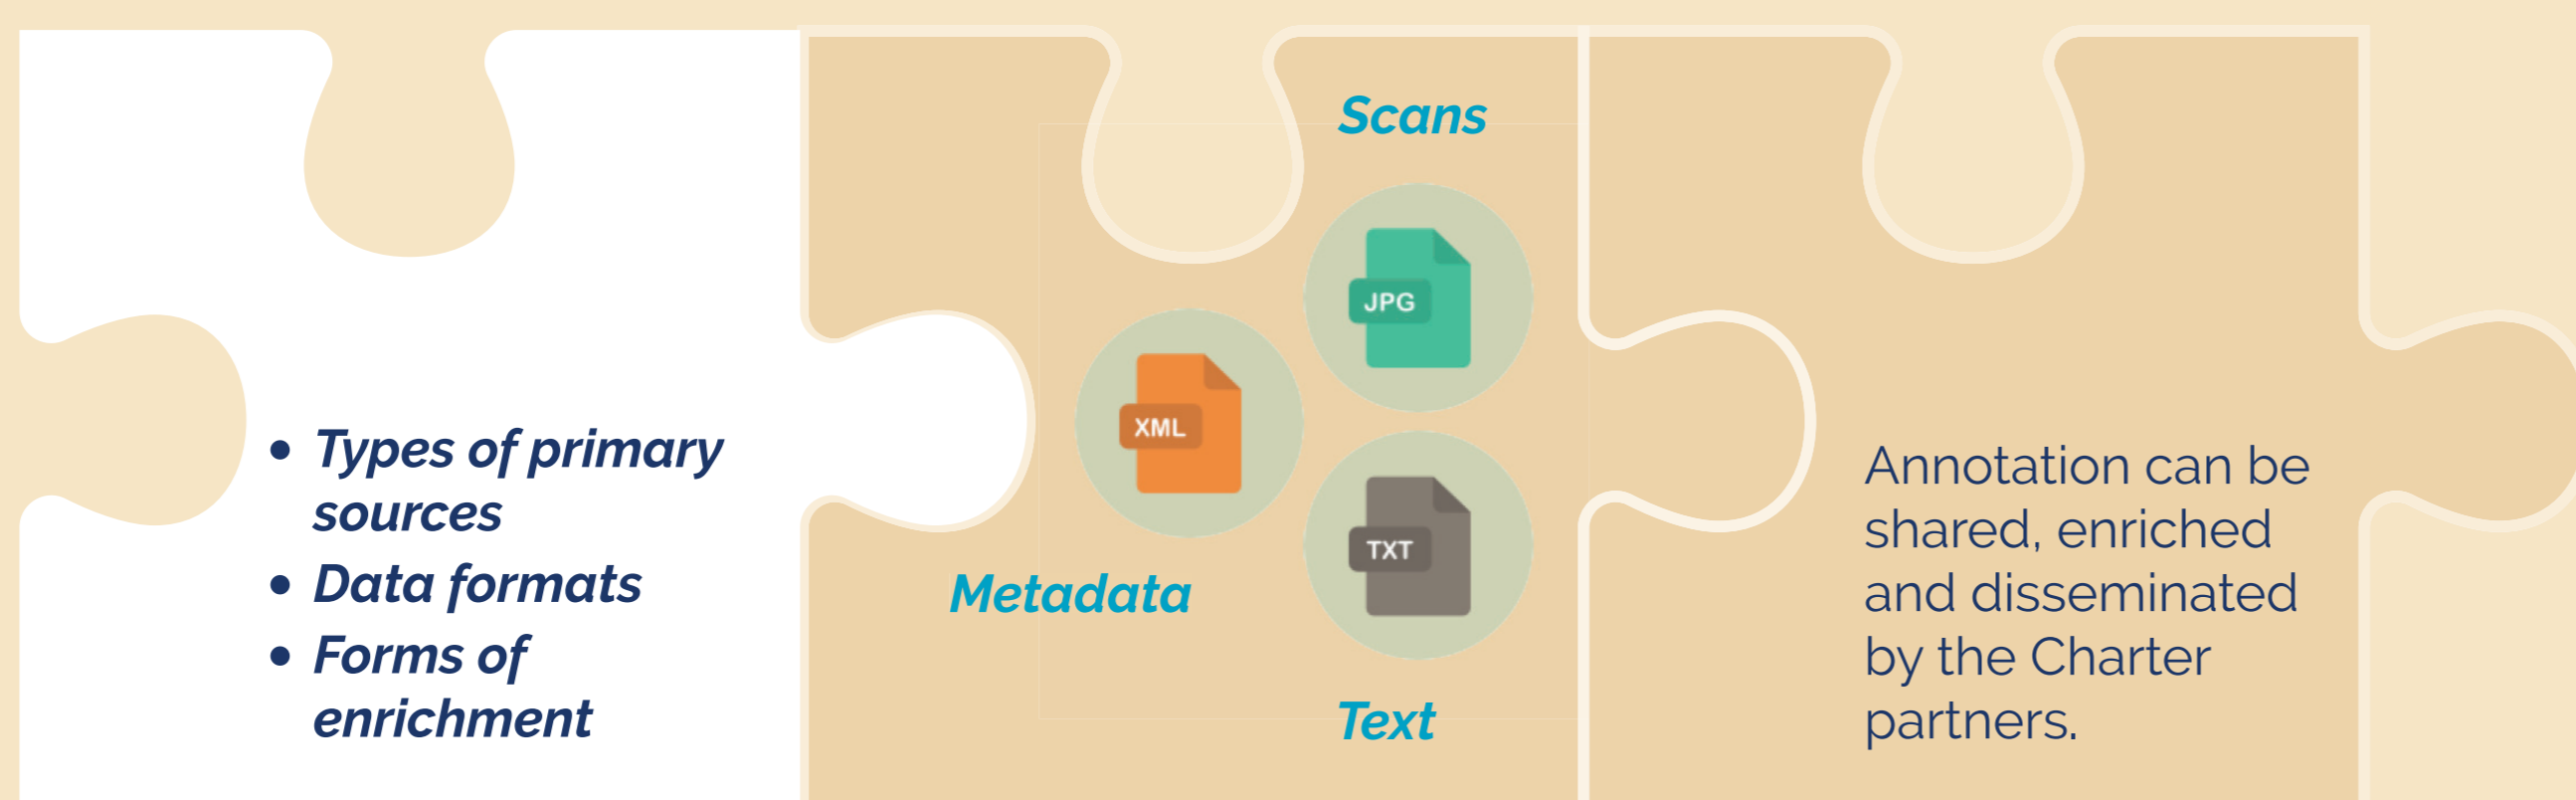

### Offering a comprehensive framework

including all aspects relevant to Cultural Heritage data reuse

### Supporting collaboration

between all those working with and on digital data originating from Cultural Heritage Institutions

**As a scholar** joining the Charter, you can position yourself in the research ecosystem by:

- declaring your willingness to follow the requirements of the Cultural Heritage Institutions and the collections

you would like to work with

- declaring the licenses you use for your work (information on licensing is provided)
- defining how you want to be cited by the signed-up

members of the Charter you work with

- adhering to the Charter Mission Statement and collaborating according to it.

You can determine the **conditions of your public online presence** by choosing how much information you wish to share.

With a clear and open citability of all the partners, you can benefit from ever-in-

creasing resources:

- precise information on the datasets that might interest you
- direct contact with the person responsible for the datasets or topics you are interested in

- new opportunities of cooperations
- better metadata and data quality
- better overall visibility of the actors as well as resources.

**As a Cultural Heritage Institution** joining the Charter, you can offer your collections a new visibility by:

- using a platform that allows to coordinate with all concerned actors

(Cultural Heritage Labs, Data Centers, Research)

- defining precisely, for each dataset and each type of data associated to them, the conditions for their reuse

- addressing questions of hosting and dissemination of data resulting from experiments on Cultural Heritage assets within a comprehensive framework.

All partners in the Charter will benefit equally from the greater visibility and communication made possible by joining forces.
