Participants are invited to bring in their own use cases!

Abstract Bazaar contribution:

Corpora of Disordered Speech (CDS) are difficult to find, very costly to collect, and for privacy reasons hard to share. On the other hand, due to their small size and dedicated purpose, they should be combined to be suited for re-use. A strong need is felt by the research community to bring together existing and new CDS in an interoperable and consistent way that is both legal and ethically safeguarded.

[DELAD](#) is an initiative to join forces on sharing CDS. Together with CLARIN-ERIC DELAD organizes workshops to work on guidelines and solutions regarding legal, ethical and technical issues. In this light, steps are made to get a clear view on use cases to mitigate the risks for participants in the light of the GDPR.

In the GDPR a Data Protection Impact Assessment is the required method to assess risks and design mitigation measures.

A team at the University of Groningen received a COMENIUS senior fellowship for educational innovation for the project Privacy In Research: Asking the right questions. The team uses the DPIA method to actively involve students, researchers and support staff to build privacy in the design of research projects and explore the dilemmas, risks and use cases in a specific domain. We want to show you a video on a case on Parkinson disease and other materials. Please join us to share your insights in field specific use cases and ethical good practices.

In the Bazaar session the DELAD and COMENIUS team will join forces to explore specific needs and use cases for privacy compliant data sharing in the field of Disordered Speech.

In our contribution we will describe the services and information that DELAD can offer, we will explain relevant issues in the light of the GDPR, including DPIA's, and present a number of use cases by way of illustration. There will be ample time for questions from the audience.
