This ticket collects information on the centres which do not publish explicit information about their preferences concerning formats for deposition but rather link to clarin.eu subpages for that purpose. Cases where explicit info on recommended formats exists apart from links to clarin.eu, an additional line is added with "(own info)". Note that "own info" is the positive, endorsed situation (each centre has its own profile and expectations). Eventually, the positive information from each centre will be expected to be collected in the [Standards Information System](#).

The reason for listing this information is:

- to have general info on the "trends" of handling this assessment requirement,
- to identify the specific targets (the targeted resource will often be obsolete; it is good to know whether some centre is pointing there before we e.g. decide to remove it),
- to see if more than one source page is involved, for the given centre,
- to help these centres in identifying and amending this issue (i.e., to define centre-specific data-deposition format recommendations).

B-centres

One conclusion that should be drawn from the emerging picture is that the CSC should target the stock FAQ page that many centres use, in order to get the address of the "CLARIN recommendations" changed right there, at the source. The next step will then be to effect an update of that stock FAQ in the centres that use it.

Centres aiming for the "B" status

These centres are not obligated to explicitly publish information about what formats they recommend for deposition. However, some of them already accept depositions, and all are listed as aiming for the "B" status, so at some point they will need to undergo assessment.
